CONCEPT

PREAMBLE

Win Edge, a revolutionary fintech, is on a mission to make painless savings accessible to hundreds of thousands, if not tens of millions of people around the world. With Win Edge, saving becomes simple, effortless and adapted to modern lifestyles. Our innovative platform opens up new possibilities for anyone who wants to achieve their financial goals while maintaining their daily comfort.

THE PROBLEM

We face the following problem: when inflation exceeds the interest rates of Livrets A and other traditional savings products, it means that investments are in deficit.

Unfortunately, this reality affects hundreds of millions of people around the world. In this context, it became essential to find a solution that would preserve the value of savings and generate returns above inflation.

It is with this in mind that we have developed the Win Edge concept, an innovative platform based on blockchain technology.

OUR SOLUTION

Our fintech solution stands out for its ease of use and complete automation. By allowing users to link their bank account to our platform, we ensure a secure reading of movements thanks to the APIs provided by banks, without the possibility of carrying out transactions. Each expense made is automatically rounded up to the next euro, and the difference is converted into Bitcoin (BTC) and then credited to the customer's decentralized wallet. This offers users the opportunity to save small amounts of Bitcoin over time, which promotes their financial growth.

Our approach is also distinguished by higher monthly returns than traditional Livrets A and savings accounts, which often yield only a meagre rate of 1.5% per year. Thus, users can maximize their financial growth potential while maintaining the flexibility to access their funds at any time.

In addition to building up progressive capital, our solution also has a social dimension. Indeed, we have integrated a solidarity and social responsibility program where, at regular intervals, the members of the governance select a charity to finance. A portion of the fees levied on each transaction is dedicated to supporting these associations, offering users the opportunity to contribute to causes that are important to them.

Thanks to our platform, users can not only grow their capital gradually, but also participate in charitable initiatives, thus promoting a solidarity and responsible approach.

With Win Edge, your money works for you, while remaining accessible when needed.

ECOSYSTEM WIN EDGE

Win Edge is working to build its own ecosystem by offering a full range of services and solutions to facilitate access to decentralized finance.

We combine our own cryptocurrency, an advanced decentralized wallet dashboard, an AI-driven trading module and a payment method to create a complete and reliable ecosystem.

Our goal is to simplify the user experience, enabling them to manage and grow their digital assets seamlessly.

WIN EDGE TOKEN (WIT)

We launched our own cryptocurrency, the Win Edge Token (WIT), on the Binance Smart Chain (BSC) blockchain. The WIT is designed according to a deflationary model, thus offering long term valuation prospects for holders. By integrating WIT into our ecosystem, we aim to enhance its value and stability as a currency in its own right.

DECENTRALIZED WALLET DASHBOARD

Our ecosystem includes an advanced management dashboard for decentralized wallets. This management module goes beyond the simple function of storing cryptocurrencies by offering very advanced information that is easy to read and understand. Users benefit from a real dashboard and a management tool to optimize the management of their digital assets. Our goal is to make decentralized wallet management accessible to everyone, regardless of their level of experience.

AI AUTOMATIC TRADING

To simplify trading operations, we have integrated an automatic trading AI into our ecosystem.

Users do not need to know the technical details of the cryptocurrency or trading strategies.

Our AI performs transactions in an automated manner using sophisticated algorithms, maximizing returns for users. This simplified approach allows everyone to enjoy the benefits of cryptocurrency, even without technical expertise.

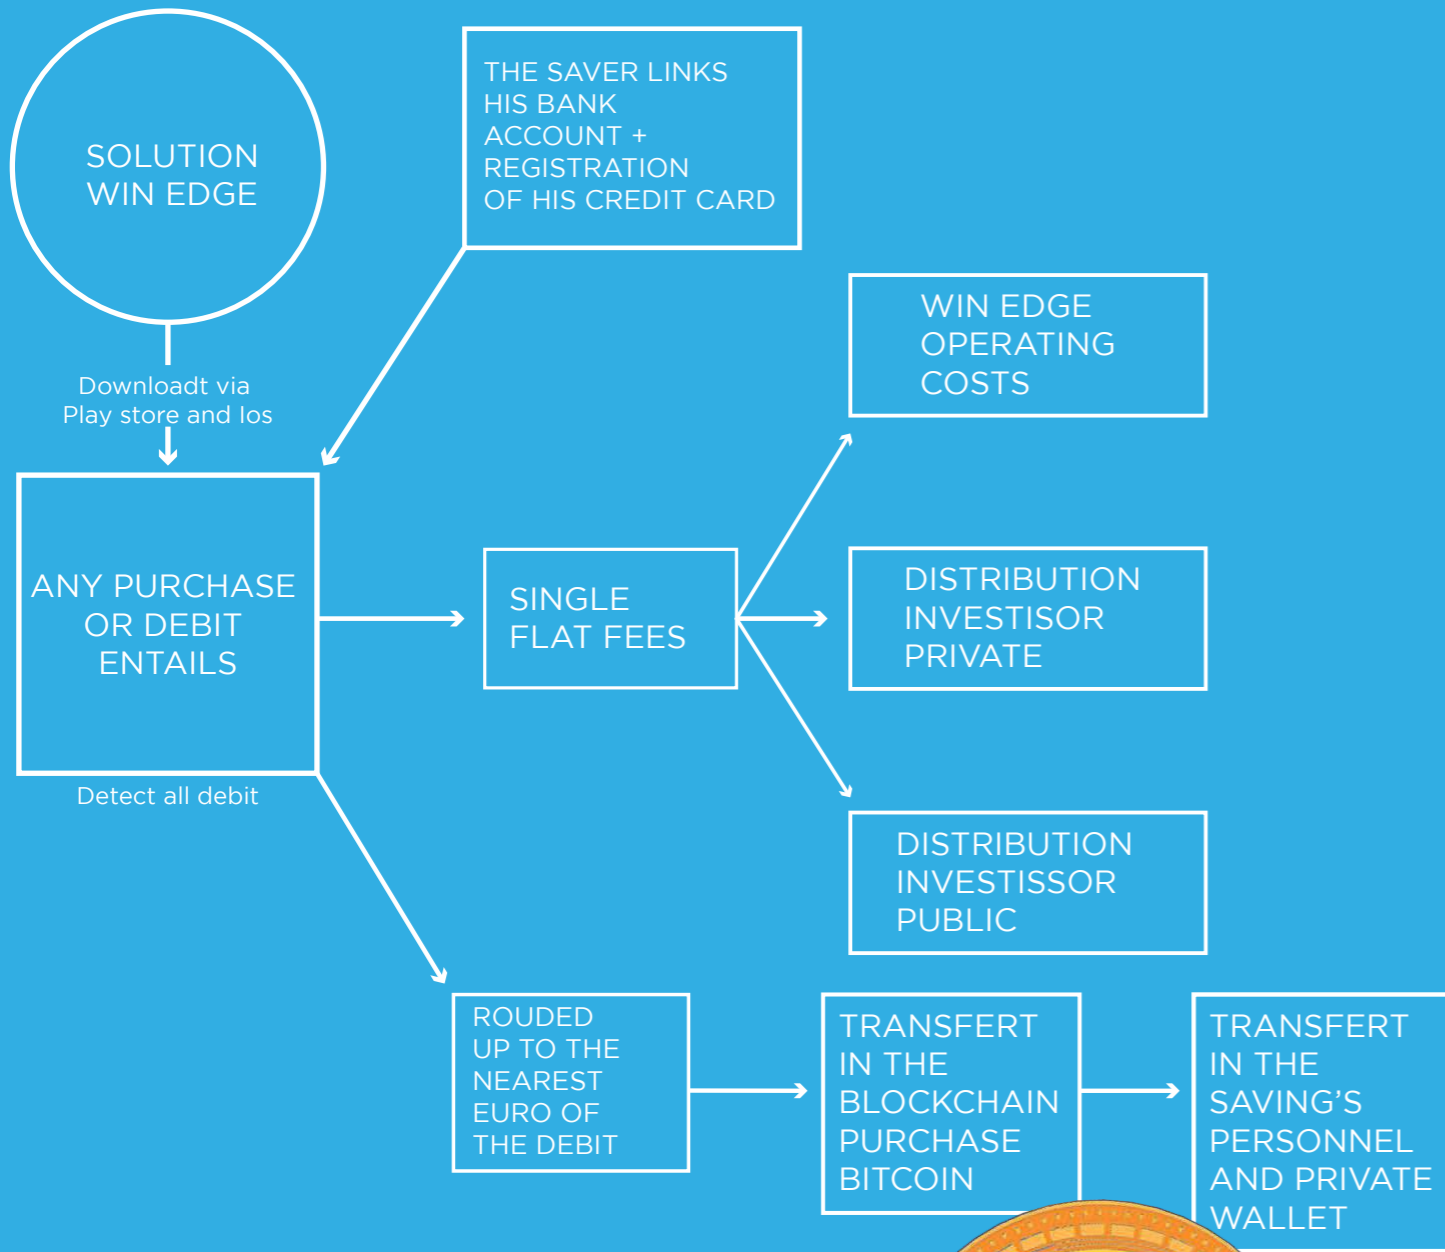

SIMPLIFIED PAYMENT METHOD

As part of our ecosystem, we are working on a simplified and automated payment solution.

When users make a purchase from a merchant, our system automatically converts the WIT amount into the local currency. This process takes place seamlessly, without the need for the merchant to directly manage the WIT. For the merchant, it is simply a payment in euros or dollars, thus simplifying the payment experience.

HOW IT WORK ?

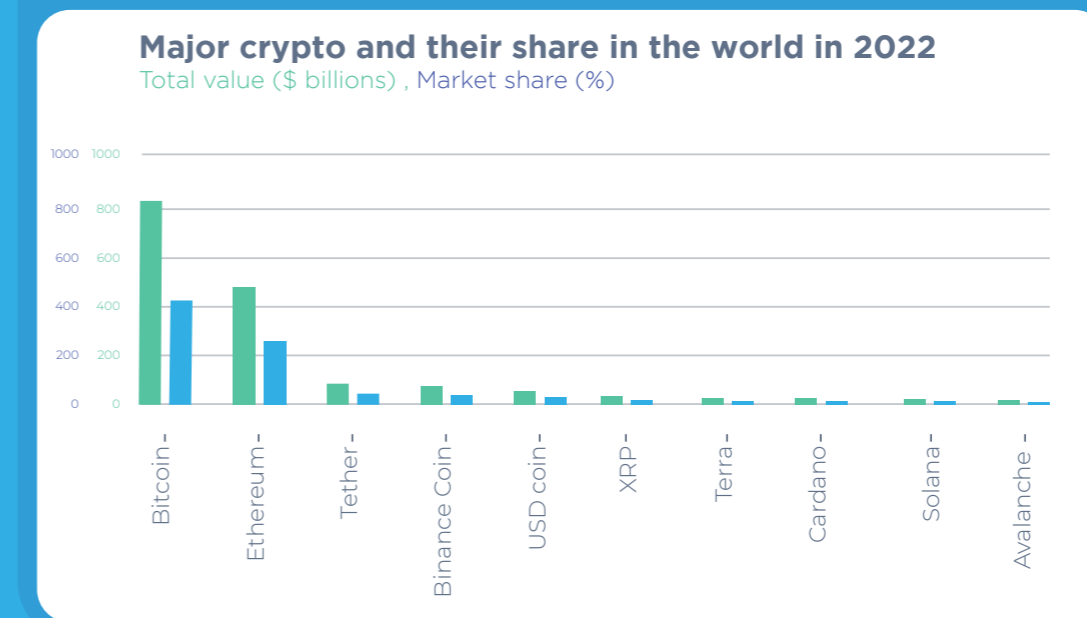

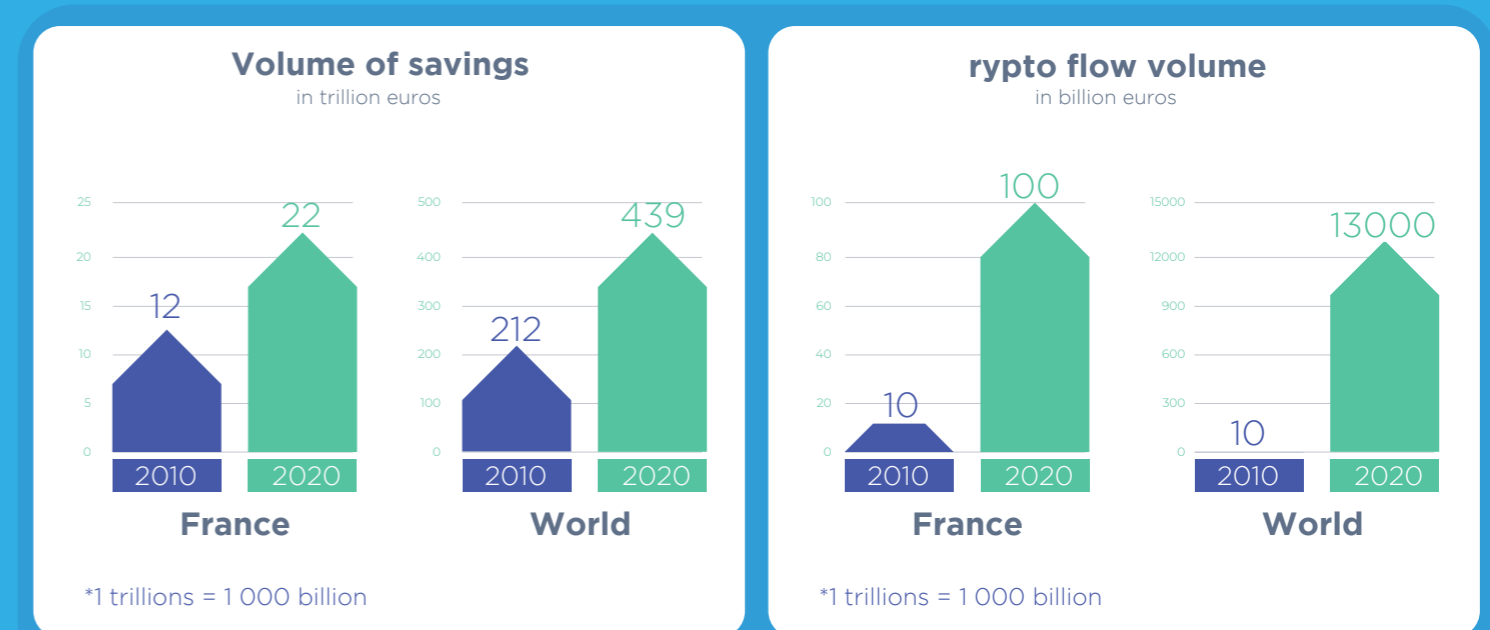

Storing BTC on a decentralized wallet has several key benefits. First of all, it allows users to have full control over their funds. Decentralized wallets use private keys that are held exclusively by users, ensuring the safety of their assets. In addition, by using a decentralized wallet, users avoid the risks associated with centralizing funds, such as hacks of centralized platforms.

MARKET

The savings and crypto market are growing, and digital plays an important role in this evolution. Indeed, digital has made it possible to facilitate access to savings and crypto products, and to make them more transparent. This has increased investor confidence and stimulated market growth.

Digital has also made it possible to make the Earth a village. Indeed, investors can now invest in savings and crypto products from around the world, with just a few clicks. This has given rise to a global savings and crypto market, which is booming.

41.62%

of global flows are made with **Bitcoin** hence our choice

TOKEN

The Wit token is designed to have a fixed supply of 10 billion tokens, corresponding to the estimated world population by 2050. The amount of Wit tokens will not move, which creates scarcity and growth potential of the token price

VOCATION OF WIT

The WIT token (Win Edge Token) has a clear vocation: to become an international payment currency. Our ambition is to position WIT as a widely accepted digital currency used in transactions across the globe. By offering a simple and secure payment solution, our goal is to enable Win Edge users to make instant and cost-effective transactions, regardless of their geographical location. We are actively partnering with payment platforms and merchants to facilitate the acceptance of WIT as a means of payment, both online and in brick-and-mortar stores. This vision to make WIT an international payment currency reinforces our commitment to decentralized finance and our desire to offer a global solution for digital asset management

CHARACTERISTIC

The Win Edge token will have the following characteristics at startup:

- 10 billions tokens are issue
- Under Binance Smart Chain BSC

WHY INVEST?

MARKET SIZE:

The savings and crypto market are huge, with billions of dollars of capital invested. Cryptocurrencies have become an attractive financial asset for investors looking to diversify their portfolios and take advantage of high-return opportunities. Decentralized finance (DeFi) platforms have also gained popularity, offering users attractive returns on their deposits and lending and borrowing opportunities.

CONTINUOUS GROWTH :

The savings and cryptocurrency market are experiencing continuous growth, fueled by several factors. First, the increasing adoption of cryptocurrencies by traditional financial institutions and large corporations has boosted investor confidence and attracted new players to the market. In addition, the emergence of new technologies such as blockchain and smart contracts has enabled the development of more advanced and accessible decentralized financial solutions.

USER REQUEST :

Users are increasingly attracted to the opportunities offered by savings and cryptocurrency. The possibility of high earnings, the flexibility of investments and portfolio diversification attract many savers. In addition, savings and cryptocurrency offer an alternative to traditional financial systems, allowing users to have full control over their assets and benefit from faster and more cost-effective

EMERGING TRENDS

We are also seeing the emergence of new trends in the savings and crypto market. For example, cryptocurrency staking is gaining popularity, offering users the opportunity to earn rewards by locking their assets in DeFi protocols. In addition, NFTS (Non-Fungible Tokens) have become a popular digital asset class, allowing users to own unique digital artwork and other virtual goods

ECONOMIC MODEL

3 SOURCES OF INCOME FOR INVESTORS:

- The daily annuity per transaction
- Staking (1 to 15% depending on investment level)
- The crypto market

DAILY PENSION

A decisive advantage Within our Win Edge ecosystem, being a Jellyfish holder gives you an exceptional advantage: the ability to benefit from a portion of the transaction fees generated by purchases made by hundreds of thousands, if not millions, of people around the world. The more tokens you hold, the greater your share in this remuneration.

PROGRAMME DE STAKING

Programme ambitieux, staking automatique, versement tous 15 jours, ci-joint le tableau de rémunération

Investir dans notre concept offre des avantages uniques, allant d'un marché prometteur à une accessibilité accrue, en passant par des mécanismes de récompense innovants. C'est une opportunité à considérer pour ceux qui recherchent une épargne différenciée et souhaitent participer à l'évolution du monde des crypto-monnaies

This daily pension is indexed to the expenses made by members of our painless savings program. And considering the fact that many users spend multiple times a day, the potential revenue is significant

Every day, you will wake up to find that you have been credited to your account, and this privilege will accompany you throughout your life.

To better understand your future earnings, make a simulation using the following link: winedge.io/win

Win Edge is thus positioned as a pioneer, being the first business concept to offer such an innovative and advantageous remuneration. Our belief is based on the principle that without you, none of this would be possible, and that is why we consider it our duty to reward you for your essential contribution to the construction of this promising adventure. Together, we are moving towards a prosperous future with Win Edge."

STACKING PROGRAM

Ambitious program, automatic staking, payment every 15 days, from 1 to 15% / year

ICO

The Win Edge token is issued with a total number of 10 billion tokens, symbolically representing the projected world population in the coming decades. As part of our ICO (Initial Coin Offering), we plan to put into circulation 5% of these tokens, or 500,000,000.

THE ICO ROUNDS WILL BE ORGANIZED AS FOLLOWS:

DATE	ROUND 1	ROUND 2	ROUND 3
	From September 11th July to October 11th	October 13 to October 27	From October 28 to November 15
	250,000,000 Win Edge tokens	Then we will offer 150,000,000 tokens	we will make available the last 100,000,000

The objective of our ICO is to raise a total amount of € 1,600,000 over the three rounds. This will allow us to fund the development and growth of Win Edge while providing investors with the opportunity to participate in our future success.

By symbolically aligning the total number of tokens issued with the projected global population of 10 billion, we hope that Win Edge will become a valuable tool for users around the world, providing opportunities and benefits to each of them.

This progressive distribution of rounds and dates will allow for staggered and fair participation in our ICO, providing an opportunity for a wide range of participants to acquire Win Edge tokens.

WHERE TO GET ICO

To acquire ICO from the Win Edge, you need to go to: <https://ico.winedge.io/> To acquire ICO from the Win Edge, you need to go to: <https://ico.winedge.io/>

SPONSORSHIP

Each holder of the Win Edge token will have a referral link, which will have to transmit to acquaintances and contacts in order to benefit from additional reward as well as his godson.

You will be rewarded in Token as in the attached table

Sponsorship board

1 TO 10 REFERRALS	→ 3% BONUS
11 TO 40 REFERRALS	→ 6% BONUS
41 TO 70 REFERRALS	→ 7% BONUS
71 TO 100 REFERRALS	→ 8% BONUS

BEYOND 10% BONUS

AIR DROP

An Air drop plan is set up, for this you have to go, on <https://winedge.io/freetoken>, then:

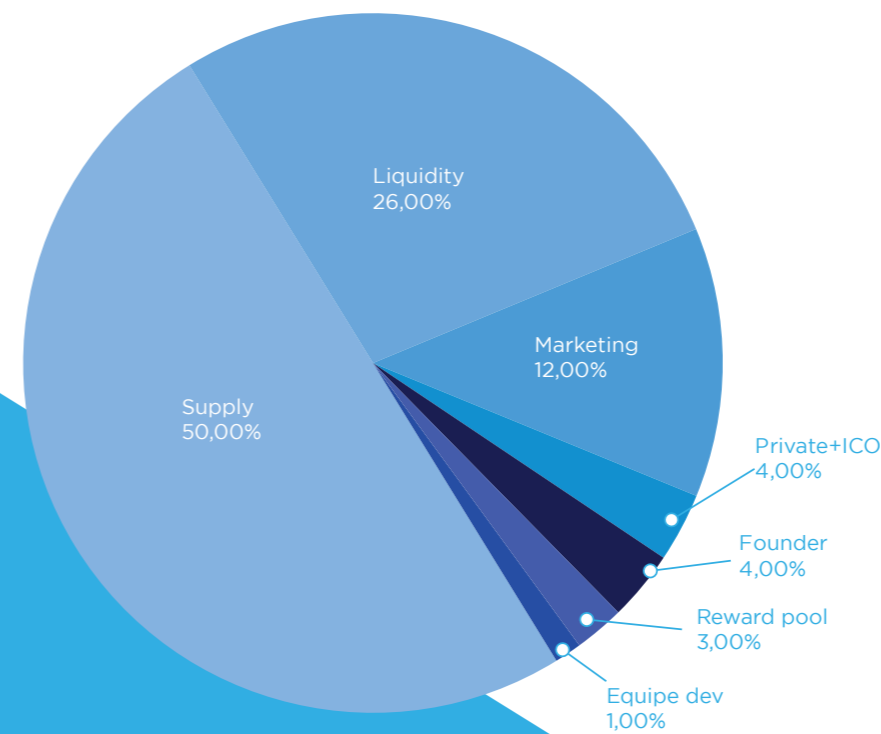

- Suscribe
- Share on FB, tweet and TikTok

“
You will receive within 7 days x Win Edge”

TOKENISATION

DISTRIBUTION

- 5% Founder
- 11% Marketing
- 25% Liquidity
- 6% Reward pool
- 2% Equipe dev
- 6% Private + ICO
- 50% Supply

SOCIAL FIGURATIVE

We attach great importance to our social responsibility as an economic player. That is why we have implemented concrete social actions, including financial support for charities.

We actively encourage the involvement of our community in the selection process of the charities we support. Investors who are members of our governance have the opportunity to actively participate in the selection of these associations, thus ensuring fair representation and collective decision-making.

We ensure that funds donated to charities are allocated transparently and in line with the core values of our project. Transparency is a priority for us because we want our investors to be confident that their contribution has a real and positive impact on society.

By encouraging this true community involvement, we create an ecosystem where every member of our community can help shape the social impact of our project. Together, we work to build a better and more united world, supporting causes that are important to us and making a real difference in the lives of those in need

SELECTION

The selection of charities takes place in a participatory and transparent manner within our governance. Interested associations can submit their application via our website, providing information on their missions, achievements and impact. Once the files are received, our governance, composed of the investor members, carefully reviews each proposal.

Members have voting rights proportional to their investment, which ensures fair representation. Each member has the opportunity to actively participate in the selection of charities. The votes are then counted and the associations that have received the most support are chosen to benefit from our financial contributions. This democratic approach ensures collective decision-making and allows our community to have a significant impact in choosing the causes we support

SECURITY

BANK

Our app uses state-of-the-art banking technologies, such as end-to-end encryption and secure protocols such as OAuth, to ensure a risk-free connection to your bank account. We would like to emphasize that the security of your information is our top priority.

When you link your account to Win Edge, we establish a secure connection using advanced encryption technologies, such as SSL/TLS (Secure Sockets Layer/Transport Layer Security), which provide encryption of data during transmission. This ensures that your personal and financial information is protected from interception or unauthorized access. When you link your account to Win Edge, we establish a secure connection using advanced encryption technologies, such as SSL/TLS (Secure Sockets Layer/Transport Layer Security), which provide encryption of data during transmission. This ensures that your personal and financial information is protected from interception or unauthorized access.

STORAGE

In addition, we would like to clarify that we do not store any banking information on our servers. Your bank credentials are used only at the initial login to establish a secure connection with your bank, and this information is never saved. This means that even if our servers are compromised, your banking information remains completely secure.

Once the secure connection is established, for each expense you make, we automatically recover the corresponding amount in euros, rounding the amount. This sum is then invested in the following cryptocurrencies:

CRYPTOGRAPHY:

We use robust cryptography algorithms to secure sensitive data, including private keys, passwords, and credentials

Our entire architecture is based on strong security and privacy principles. We use advanced encryption protocols to protect sensitive user data, such as bank account information and private keys of decentralized wallets. In addition, we implement multi-layered security mechanisms to prevent potential attacks.

In our architecture, we leverage blockchain technology to ensure the security and inviolability of transactions and data. Here are some key things about blockchain and its security benefits:

Blockchain :

Blockchain is a distributed and decentralized technology that records and verifies transactions transparently and securely. Each transaction is added to a block of the blockchain and then cryptographically linked to the previous blocks, forming an immutable blockchain. The decentralized nature of blockchain ensures that data is spread across many nodes in the network, making manipulation or falsification of information extremely difficult, if not impossible.

Tamper-proof aspect of the blockchain:

Transactions recorded on the blockchain are secured by advanced cryptography algorithms, such as hash functions and digital signatures. Each transaction is verified by network nodes using consensus mechanisms, such as Proof of Work or Proof of Stake, ensuring data integrity.

Once a transaction is validated and added to the blockchain, it becomes virtually impossible to modify or delete, building user trust and security

Web 3.0 :

Web 3.0 is an evolution of today's Web, with an emphasis on decentralization, security, and data privacy. Thanks to blockchain, Web 3.0 allows users to control their data and digital assets without having to trust third parties. Decentralized applications (dApps) built on Web 3.0 use smart contracts, which are standalone programs running on the blockchain, to ensure secure execution of transactions and predefined rules.

Bank account link security:

When it comes to linking a bank account, we have rigorous security protocols in place to protect users' sensitive information. We use advanced encryption protocols to secure bank account data, such as account numbers and credentials. Connections are secured via encrypted communication protocols such as HTTPS, ensuring the confidentiality and integrity of data during transmission. We apply robust authentication mechanisms, such as two factor authentication (2FA), to increase security when linking the bank account. By combining the features of blockchain, Web 3.0 and advanced security protocols, we create a highly secure environment for our users. Blockchain technology ensures transparency, integrity and resistance to data tampering, while Web 3.0 offers a ...

NETWORK & TECHNOLOGY

Our Win Edge cryptocurrency will be deployed on **the Binance Smart Chain (BSC)**. BSC is a network of which appeared only very recently, nevertheless it is experiencing strong growth in terms of used and development. It is an extremely secure and popular, we chose this network in order to be able to take advantage of the low transaction costs on the BSC. The WINT token and those of beneficiary will therefore be on the Binance Smart Chain.

FUNCTIONING

Thanks to a **Proof of Stack** consensus algorithm, the Binance Smart Chain will issue a block every 3 seconds. The process used is more precisely an algorithm quite similar to the one mentioned earlier, BSC uses an algorithm called **Proof of Stacked Authority (PoSA)**. This algorithm allows participants to stack their BNBs or Binance tokens to become block validators. By holding their cryptocurrency (BNB) for a certain period of time, they will be able to validate blocks and may be rewarded with transaction fees.

WIN EDGE NET WORK

The Win Edge launched on the Binance Smart Chain will therefore work in a similar way. The blocks will be issued using the Proof of Stacked Authority algorithm and will be validated by our users who will have stacked the cryptocurrency.

WALLET BINANCE SMART CHAIN

The Win Edge cryptocurrency will be able to be stored and exchanged via wallets compatible with the Binance Smart Chain. It will therefore be possible to keep your Win Edge tokens in cryptocurrency wallets like Meta Mask, Trust Wallet, Guarda, Math Wallet, Safe Pal, etc. There are also compatible physical wallets like the Elli pal Titan which is able to support all tokens in the Binance Smart Chain.

BINANCE SMART CHAIN TRANSACTION FEES

Binance Smart Chain transaction fees are not fixed unlike Binance Chain. Nevertheless, the fees have always been very low compared to other similar ones like Ethereum. The price of transactions on the BSC is only a few cents of dollars.

CONCLUSION

The conclusion of our Win Edge project highlights because we chose cryptocurrency as a savings solution in the face of the changing global economic context, marked by events such as the BRICS meeting and increasing de-dollarization.

We have opted for an approach independent of central banks and political organizations by turning to a cryptocurrency, in order to protect our savers from the potential impacts of these changes.

This white paper provides a comprehensive overview of the Win Edge concept and its development. Using our expertise in technology, we are creating an ecosystem focused on savings and cryptocurrency with returns above inflation.

Win Edge is not only a technological and financial solution, but also aims to build trust, while allowing control via Binance Scan. In this way, we offer hundreds of thousands of people around the world the opportunity to save painlessly and automatically.

To achieve this goal, we chose Binance Smart Chain, which solves Ethereum's current problems in terms of congestion, asset compatibility between chains, and high transaction fees. These standards are combined to create a scalable solution in a fully community-controlled money market through our governance token.

We are convinced that Win Edge will bring real innovation in the field of savings and finance, offering everyone the opportunity to actively participate in a decentralized and transparent financial system
